

User Guide - Navigational Tool

How to use the application

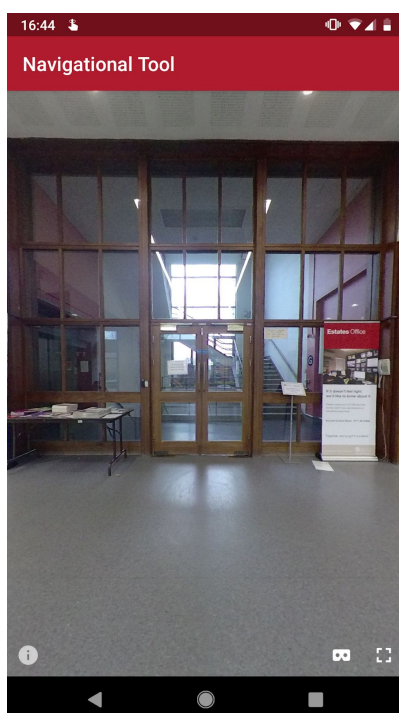

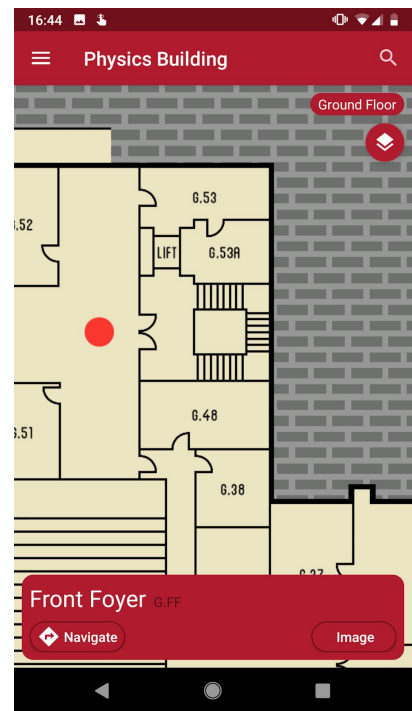

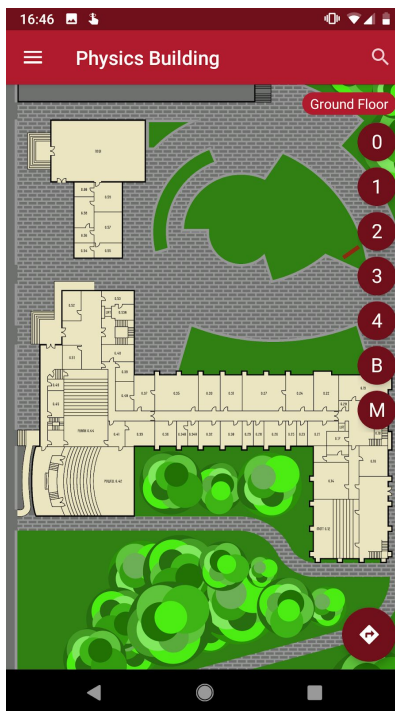

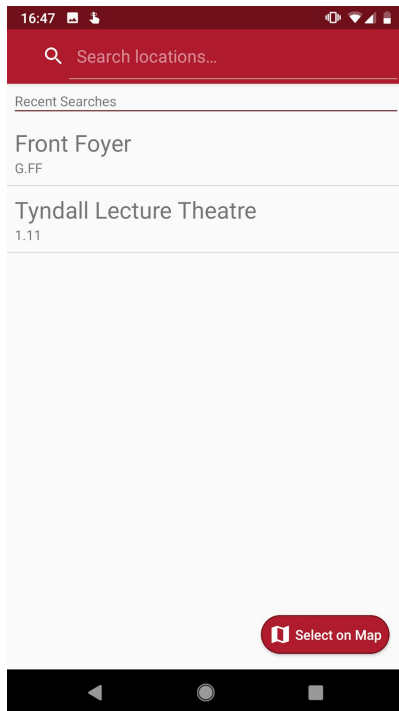

Initialisation

Upon opening the application you will be presented with a map view consisting of a search button in the top right, a floor selection button just below that and a navigation button in the bottom right. Swiping right from the left edge of the screen will reveal a drawer which presents you with three settings; the first being a choice of buildings to navigate, the second being a toggle for staff access which will allow navigation to staff restricted areas and the third being a toggle for disabled access which will navigate you with wheelchair accessibility considered.

Exploration

In order to explore the building, you can use the search button to search for locations by either their name or code, or you can use the floor selection button to select the desired floor and simply click on the map and it will select the closest location. Once a location has been selected you will be presented with options to navigate from said location or, if applicable, view a 3D image of said location using either swipes or the rotation of your phone to explore it.

Navigation

To navigate through the building, you can use the aforementioned exploration methods to start a route to the selected location, or use the navigation button to start a route, in which case you have to select both the origin and destination location. Once both locations have been selected the route will be calculated and visually displayed on the map. A Show Directions button may be clicked to reveal a sequence of written directions, which can be traversed with the arrow buttons. The route and floor shown will update automatically to reflect your current position in the sequence of written directions.
